Regeneration.

The valvular endothelium of every subject examined
showed small-celled islets with a large number of
amitoses. The fact that the small-celled islets and
numerous amitotically dividing nuclei and cells are
constantly present in the endothelium of the cardiac
valves indicates high physiological regeneration

DESCRIPTORS: *Springs, *Copper alloys, Relaxation
time, Temperature, Heat treatment, Stresses,
*Elasticity.

Results are given of investigations of strain relaxation
in standard brands of copper alloys used for spring
materials. From the alloys hardened by cold working
the highest relaxation resistance is observed at 200-
350° for German silver E5-20 (copper-zinc-nickel
